

UGANDA

Child Stunting and Overweight

Key figures and trends

MAY 2025

STUNTING

Progress towards World Health Assembly (WHA)
 Global Nutrition **stunting target**.

WHA Global Nutrition Stunting Target 2012-2025

Achieve a **40%** reduction
 in the number of children
 under-5 who are stunted

- Prevalence of stunting among children under five years fell from *very high* in 2012 to *high* in 2022.
- Rates in Uganda are well below the UN regional average for Eastern Africa.
- Despite progress, Uganda remains off-track from the WHA target for child stunting, with a gap of 5.3 between projection and target.

Figure 1: Under-five stunting prevalence, Uganda, 2005-2022 and projected to 2025

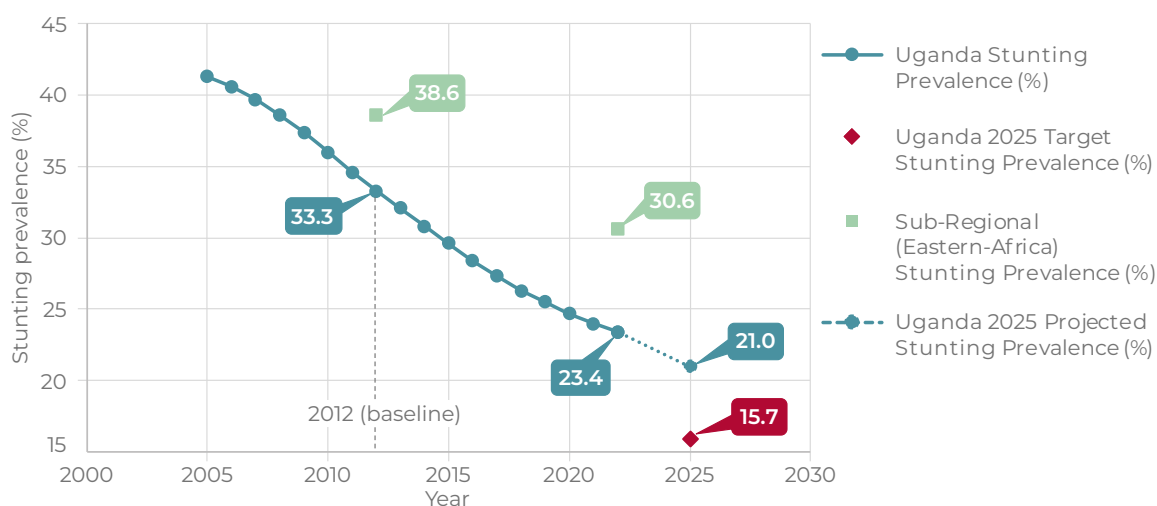

Table 1: Under-five (U5) Stunting Data Profile, Uganda

Key Indicator	Value
Baseline Prevalence 2012 (%)	33.3
Baseline U5 Population 2012 (millions)	6.4
Baseline Stunting Burden 2012 (millions)	2.1
Current Prevalence 2022 (%)	23.4
Current U5 Population 2022 (millions)	7.8
U5 Population Growth Rate 2012-2022 (%)	21.5
Current AARR* (2012-2022)	3.5
Projected Prevalence 2025 (%)	21.0
Target Stunting Burden 2025 (millions)	1.9
Projected U5 Population 2025 (millions)	11.2
Target Prevalence 2025 (%)	16.5
Required AARR (2012-25)	6.4
Classification of Country's Progress	Off track – some progress

*AARR = Average Annual Rate of Reduction

OVERWEIGHT

Progress towards World Health Assembly (WHA)
Global Nutrition **overweight target**.

- Prevalence of overweight among children under five years old remained low with a slight fall between 2012 and 2022.
- Rates in Uganda are very close to the UN regional average for Eastern Africa.
- Uganda is on-track to meet the WHA target for child overweight, with projected 2025 rate **0.5 below** target.

Figure 2: Under-five overweight prevalence, Uganda, 2005-2022 and projected to 2025

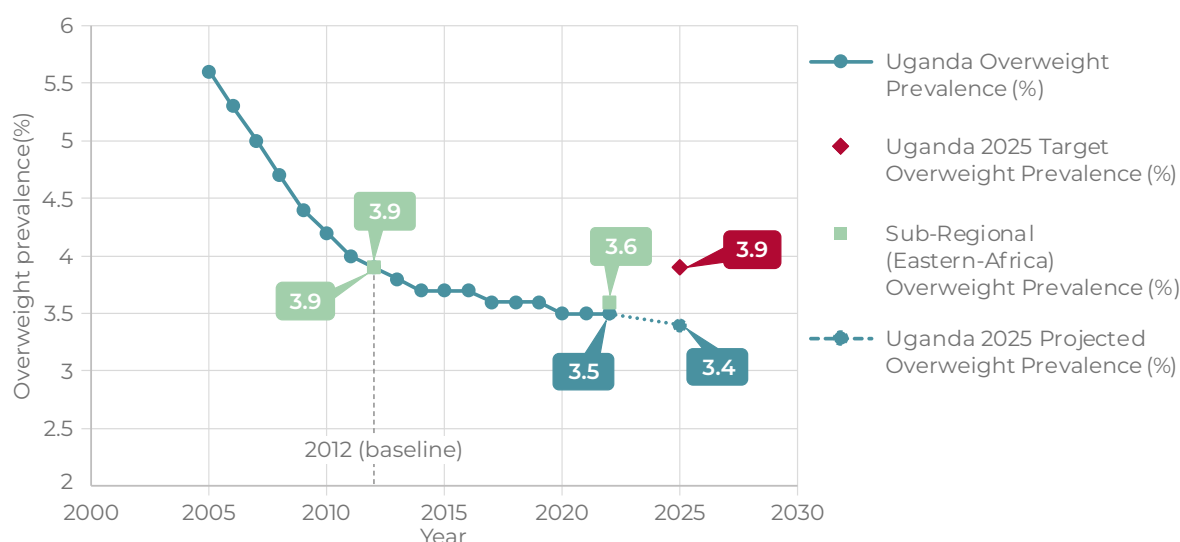

Table 2: Under-five (U5) Overweight Data Profile, Uganda

Key Indicator	Value
Baseline Prevalence 2012 (%)	3.9
Current Prevalence 2022 (%)	3.5
Current AARR* (2012-2022)	1.0
Projected Prevalence 2025 (%)	3.4
Target Prevalence 2025 (%)	3.9
Required AARR (2012-25)	0.0
Classification of Progress	On track

*AARR = Average Annual Rate of Reduction

Data sources: Joint Malnutrition Estimates for stunting and overweight prevalences. Population from United Nations World Population Prospects. Classifications of progress are aligned with UNICEF methodology and determined by current AARR thresholds.
